KEVIN LIN

New York, NY | 718-666-7842 | kevinlin032202@gmail.com
linkedin.com/in/coutlike | github.com/coutLiKe | coutlike.github.io

EDUCATION

CUNY Queens College – Bachelor of Arts in Computer Science, 2025
NPower (NetSA Program) – Certificate of Completion

SKILLS

Certifications: CompTIA A+, CompTIA Network+, CompTIA Linux+, CompTIA IT Operations Specialist (CIOS), CompTIA Systems Support Specialist (CSSS), CompTIA Linux Network Professional (CLNP), Microsoft Certified: Azure AI Fundamentals
IT Support: Tier 1/Tier 2 help desk, ServiceNow, ticket management, hardware and software troubleshooting, Windows, Windows Server, macOS, Linux, POS systems
Identity & Access: Microsoft Entra ID (Azure AD), user account and permission management, role-based access control (RBAC)
Networking: TCP/IP, DNS, DHCP, VPN, proxy, network connectivity troubleshooting
Security: MITRE ATT&CK, CVE/CVSS vulnerability analysis, SSL/TLS certificates, least privilege
Scripting & Tools: Python, Bash, SQL, PostgreSQL, Docker, Git, GitHub Actions (CI/CD), FastAPI, React, TypeScript, JavaScript

EXPERIENCE

Handshake | AI Trainer
03/2026 - Current, Fellowship, Remote

- **Test Environments:** Built and maintained Docker-based Linux test environments (Dockerfiles, Bash run scripts, GitHub Actions CI) so open-source Python, C++, and SQL projects build and test the same way on any machine.
- **Debugging:** Reproduced and diagnosed real bugs from open-source pull requests, implemented verified fixes, and documented each one to a strict review standard.
- **Test Engineering:** Wrote fail-to-pass and pass-to-pass regression tests for 25–500 line code changes, used to score AI model output against verified reference fixes.

New York City Department of Social Services | IT Specialist Intern
06/2024 - 08/2024, New York City, NY

- **Incident Response:** Restored 2,500+ Windows workstations on-site during the **July 2024 CrowdStrike outage** as part of a 10-person team, booting each machine into Safe Mode or Windows Recovery to remove the faulty driver file.
- **Help Desk Support:** Resolved **Tier 1/Tier 2** tickets for hardware, software, network, and account issues, including system upgrades, working each request in **ServiceNow** from intake through resolution.
- **Identity & Access Management:** Managed user accounts and application permissions in **Microsoft Azure Active Directory** (now Entra ID) for department staff.

Ten Tan Chinese Restaurant | Manager (Part-Time)
11/2018 - 05/2024, New York City, NY

- **Team Leadership:** Led a team of 4–5 staff and resolved customer issues directly during service.
- **POS Support:** Kept the POS and register system running, troubleshooting problems on the spot so service was not interrupted.

PROJECTS

TicketDesk—IT Help Desk & Asset Tracker | coutlike.github.io/ticketdesk

- **Service Desk Platform:** Built and deployed an IT ticketing and asset-tracking system (FastAPI, PostgreSQL, React) where users submit tickets, technicians assign, prioritize, and resolve them, and devices link to the tickets they cause.
- **Access Control:** Enforced requester, technician, and admin permissions on the server for every endpoint, with technician-only internal notes and immediate lockout of deactivated accounts.
- **Testing & Deployment:** Covered the API with 322 tests (97% coverage) against real PostgreSQL migrations, run in GitHub Actions CI; runs locally with Docker Compose and is live on Render, Neon, and GitHub Pages.

Endpoint Triage—Help Desk Diagnostics Tool | github.com/coutLiKe/endpoint-triage

- **Endpoint Diagnostics:** Built a read-only, one-command Python tool for **macOS, Windows, and Linux** that collects system, disk, network, VPN, proxy, and pending-update details into a report to attach to a ticket.
- **Troubleshooting Logic:** Combined gateway ping, DNS, and TCP port 443 tests to identify the likely fault (local network, DNS, firewall, proxy, or internet path) and return Nagios-style exit codes for RMM monitoring.
- **Secure by Design:** Runs without admin rights using only the Python standard library and a fixed list of system commands; tested in CI on all three operating systems, including a standard Windows user under PowerShell Constrained Language Mode.

DayGuard—macOS Security Dashboard | github.com/coutLiKe/dayguard

- **Security Monitoring:** Built a FastAPI dashboard that tracks macOS security settings (FileVault, firewall, Gatekeeper, SIP), LAN devices, SSL certificate expiry, and NVD CVE alerts filtered to CVSS 7.0 and above.
- **Reliability:** Runs as a launchd-managed menu-bar app that starts at login and restarts its backend if it stops, with a daily summary from a local LLM (Ollama) and a rule-based offline fallback.
