EDUCATION

CUNY Queens College – Bachelor of Arts in Computer Science
NPower (NetSYA Program)

SKILLS

Certifications: CompTIA Network+, CompTIA Linux+, Microsoft Certified: Azure AI Fundamentals

Networking & OS: Linux, Windows Server, TCP/IP, DNS, DHCP, Microsoft Azure AD

Security: MITRE ATT&CK, NIST SP 800-63B, SSL/TLS certificates, CVE/vulnerability analysis, network & device discovery

Tools & Platforms: Docker, GitHub Actions (CI), FastAPI, ServiceNow, Microsoft Azure, Ollama (local LLMs)

Programming: C++, Java, JavaScript, Python, HTML/CSS

EXPERIENCE

New York City Department of Social Services | IT Specialist Intern

06/2024 - 08/2024, New York City, NY

- **End-User Help Desk Support:** Provided **Tier 1/Tier 2** support, diagnosing and resolving hardware, software, network, and account issues for end users.
- **Rapid Crisis Response:** Executed emergency recovery protocols during the **July 2024 CrowdStrike outage**, physically remediating **2,500+ workstations** as part of a high-efficiency 10-member task force.
- **Identity & Access Management (IAM):** Managed enterprise user accounts and application permissions within **Microsoft Azure Active Directory**, ensuring secure access control for department-wide resources.
- **Enterprise Service Management:** Acted as the primary point of contact for technical escalations using **ServiceNow**, managing the end-to-end lifecycle of service requests from intake to resolution.
- **Infrastructure Optimization:** Performed hardware, software, and network troubleshooting and critical system upgrades to enhance departmental IT reliability.

Handshake | AI Trainer

03/2026 - Current, Fellowship, Remote

- **Evaluation Infrastructure:** Designed and maintained Docker-based test environments (Dockerfile, bash run scripts, GitHub Actions CI) across diverse open-source repositories in Python, C++, and SQL to ensure reproducible, OS-agnostic test execution.
- **Ground Truth Development:** Authored verified "golden solutions" for open-source pull requests—reverse-engineering bugs, implementing fixes, and structuring commits to strict evaluation standards ([sol], [f2p], [meta]).
- **Test Engineering:** Developed fail-to-pass and pass-to-pass test suites that validate AI model outputs against human-verified reference implementations, directly informing LLM benchmark accuracy.
- **Failure Mode Analysis:** Evaluated 25–500 SLOC changes across real-world codebases to identify edge cases and construct targeted regression tests for state-of-the-art AI systems.

PROJECTS

DayGuard—macOS Security Dashboard | github.io/dayguard

- **Systems Engineering:** Built a privacy-first macOS security dashboard on a FastAPI backend with a launchd-managed menu-bar app that auto-starts at login and self-heals when the backend goes down.
- **Security Monitoring:** Aggregated seven live signal panels—macOS posture (FileVault, firewall, Gatekeeper, SIP), LAN device discovery via arp, SSL certificate expiry, and NVD CVE feeds filtered to CVSS ≥ 7.0 .
- **Local AI Integration:** Integrated an offline local LLM (Ollama) to summarize all signals into a daily “Morning Brief,” with a deterministic rule-based fallback for full offline reliability.

PhishGuard—Phishing URL Detector | github.io/phishguard

- **Threat Analysis:** Developed a URL analysis tool performing 17 automated checks based on **MITRE ATT&CK (T1566)** techniques, including homoglyph detection and brand impersonation.
- **Privacy-First Design:** Engineered the tool for local execution in the browser with zero network requests, ensuring total data privacy.
- **Normalization:** Implemented homoglyph normalization and brand-in-subdomain checks to identify deceptive typosquatted domains.
